

Boat Deal Verification — 2026 Nautique G23 @ \$329,100

Independent verification, August 16, 2026. All figures re-sourced from current web data (listing sites, dealer inventory, Idaho State Tax Commission, owner forums). Prices from listing pages are asking prices unless marked SOLD. $\triangle$ = disagreement with your prior analysis or the dealer's claims.

1. Used comps — 2019-2021 G23 (non-Paragon) and your boat's value

Yr	Ask	Engine/Hours	Location	Source
2020	\$149,900	ZZ6 450hp, 124 hrs	Mooreville, NC	onlyinboards.com/...127412
2020	\$149,995 (sale pending)	ZZ6 450hp, 61 hrs	Irvine, CA	yachtworld.com/...9843313
2020	\$149,995	dealer retail	Montgomery, TX	boatzon.com/...1741273385710
2020	\$124,967	—	Jacksons Gap, AL	boattrader.com G23 index
2020	\$155,000	—	Bakersfield, CA	same Boat Trader index
2021	SOLD \$158,000 (5/2025)	ZZ6, 263 hrs	Greensboro, GA	onlyinboards.com/...10025509
2021	\$154,995 (sale pending)	101 hrs	Hayward, WI	haywardmarine.com
2019	\$129,995	348 hrs	Montgomery, TX	boatzon.com/...1722760337388
2019	\$134,900	877 hrs	Lindon, UT	boatzon.com/...1712736355224
2019	\$119,500	—	Carrollton, TX	boatzon.com/...1724983423824

Forum ground truth: a 2020 G23 owner reported an actual **\$112K dealer trade offer** (book expectation ~\$100K) — [PlanetNautique thread](#); a switch-cost thread pegs dealers **\$15-25K under private party** ([thread](#)). Used boats transact ~5-12% below ask; days-on-market are up ~37% YoY in a buyer's market.

Verdict on your boat (2020, mid-tier engine, manual tower, no thruster, excellent): - **Private sale: \$125-138K realistic, ~\$130K central.** $\triangle$ Your \$135-140K is the optimistic top of the range (achievable only under ~150 hrs and patient marketing); the prior analysis's \$115-130K was slightly conservative but closer to what actually clears in this market. - **Dealer trade-in: \$108-118K, ~\$112K central.**

2. Is \$329,100 a good price for this build?

- \$409K sticker is **plausible**: Tobler Marina (Idaho) lists a 2026 G23 with telescoping tower but only the **ZZ6 450hp** at **\$378,781** ([listing](#)); the ZZ8S upgrade historically ran ~\$26K (\$30K+ today) → ~\$409K checks out. Boat Trader shows standard G23s listed up to \$418,946.
- Other new 2026 G23 asks: \$319,900 (ZZ6, [Buxton, TX](#)), \$249-255K (lower-spec, FL/WY), Russell Marine MSRPs \$307,900-\$369,194.
- Discount reality: Russell Marine advertises 2025 G23s at **-16.7% to -17.3% off MSRP** before negotiation ([example](#)); forum consensus is **15-20% typical, 25% in some regions** ([thread](#)).

Verdict: \$329,100 (19.5% off) MATCHES the market — a fair, well-negotiated price, not a steal. $\triangle$ Cross-shop flag: loaded **2026 G23 Paragons with the same ZZ8S** are advertised at **\$389,000** ([Ugly John's](#)) and **\$365,375** ([American Boat Center](#)) — before negotiation. A Paragon may be reachable for \$30-50K more; worth one phone call given its stronger positioning.

Dealer claims checked: $\triangle$ "Bow thruster standard" is **false twice over** — Nautique's Integrated Steering Assist is a stern-mounted thruster and it's an **option** on the standard G23 (standard only on Paragon). It IS on your build sheet, so you're covered, but the framing was wrong. $\triangle$ "Larger surf tabs": the Surf System/WAVEPLATE is **standard equipment** on every G23 — don't credit it as a dealer concession. Get **freight/prep confirmed in writing** (\$3-8K exposure if excluded).

3. The "25% effective discount" claim

$\triangle$ **Reject it.** Your discount is 19.5% off the current sticker — that's the number. Comparing to a hypothetical MY2027 MSRP is marketing math: you could equally "save 25%" next year by negotiating 19% off the higher sticker. No public evidence of a 7% MY2027 increase exists (2027s are listed "Call for Price"); recent non-redesign

years ran ~4–6%/yr. The claim isn't absurd — Nautique raises prices every year — but it's not a discount you receive.

4. Net cost to switch — Idaho 6% tax, both scenarios

Idaho: 6% sales tax; **trade-in credit confirmed** (tax on the difference; dealer sales only, trade must be documented at time of sale) — [Idaho STC watercraft guide](#).

Purchase price	\$329,100	\$329,100
Taxable amount	\$329,100 – \$112,000 = \$217,100	\$329,100
Idaho 6% tax	\$13,026	\$19,746
Cash out	\$342,126	\$348,846
Less boat proceeds	–\$112,000	–\$130,000
Net cost to switch	\$230,126	\$218,846

Trade-in tax savings = 6% of trade value = **\$6,720**. But the private-sale premium (\$18K) exceeds it: **private sale wins by ~\$11,280** at these values. Rule: **trade-in only wins if your private price nets below 1.06 × trade offer = ~\$118,700**. If you'd actually clear \$138K private, net cost drops to \$210,846.

5. Four-year cost: switch vs. keep (2026 → 2030)

- **New boat from \$329.1K basis:** 4-year-old G23s (2022s) ask \$159–178K vs ~\$250–280K loaded-new → ~55–63% sold-value retention → 2030 value **\$185–205K** → depreciation **\$125–145K**, plus \$19.7K tax sunk.
- **Keep the 2020:** ~\$130K today → ~\$95–105K in 2030 (9–10 yr comps: 2016–17 G23s ask \$85–135K, clustering \$90–120K) → depreciation **\$25–35K**.
- **Incremental cost of switching ≈ \$115K depreciation delta + \$19.7K tax + ~\$47K opportunity cost (5%/yr on \$218.8K, 4 yrs) ≈ \$165–180K, or ~\$40–45K/year** to run a new 630hp boat instead of the 2020. That's the honest price of the upgrade — the discount doesn't change it.

6. Non-Paragon resale exit

The standard G23 depreciates at a similar percentage rate to the Paragon (Paragons actually fell hard early: 2022–23 Paragons ask \$225–270K off ~\$362K MSRP). The real exit risk is different: **△ the 2025 full G-Series redesign caps values of all pre-2025 hulls** — ~130 leftover new old-gen G23s are being cleared in the high-\$100Ks/low-\$200Ks, directly compressing 2020–2024 used values. This argues for selling your 2020 **sooner rather than later**, and slightly favors the deal: the 2026 you'd buy is the new-generation hull. Residual caveat: at resale your loaded non-Paragon will sit near lightly-optioned Paragon money, which can lengthen time-to-sell.

7. Buy now vs. wait to 2029 (all figures in 2029 dollars)

Path A: buy now \$329.1K, sell 2020 private @\$130K → net \$218,846; opportunity cost 5%/yr × 3 yrs = \$34,496.
 Path B: keep 2020 (worth ~\$100K in 2029), buy new at 2029 MSRP (\$409K grown at 5–7%/yr), 6% tax on full price, sell 2020 private.

Scenario	2029 MSRP	Negotiated	Net outlay (×1.06 – \$100K)	vs Path A (\$253,342)
5%/yr, 20% off	\$473,468	\$378,774	\$301,500	A wins by \$48K
6%/yr, 15% off (central)	\$487,262	\$414,173	\$339,024	A wins by \$86K
7%/yr, 10% off	\$501,080	\$450,972	\$378,030	A wins by \$125K

Path A's cash cost is lower in **every** tested scenario. The caveats that narrow (not flip) it: (1) at 2029, Path B ends with a brand-new boat vs Path A's 3-year-old (~\$195–210K value) — if you value ending newer, B isn't strictly dominated; (2) raising opportunity cost to 10%/yr lifts Path A to ~\$291K — still below B's best case; (3) B improves if the 2020 holds \$115K+ to 2029, which the 2016–17 comps argue against. **What actually flips the answer: only a combination of ≥20% discounts persisting into 2029, ≤5% MSRP growth, ~10% investment returns, and strong 2020 value retention — and even then it's roughly a tie.** And Path B means 3 more years living with the power problem.

VERDICT: GO — moderate-to-high confidence (~75%)

\$329,100 is a market-consistent, well-negotiated price for a genuinely ~\$409K build; the buy-now path beats waiting by ~\$50–125K in 2029 dollars; Idaho's trade-in credit is real but private sale still nets ~\$11K more at realistic values; and the soft used market argues for exiting the 2020 before pre-2025 hulls compress further.

Where I disagree with your prior work: (1) Your 2020 is more likely a **\$125–135K** private-sale boat than \$135–140K — plan proceeds around \$130K and treat anything more as upside; the prior \$115–130K estimate was nearer the truth than your figure. (2) The "25% effective discount" framing is invalid — you're getting 19.5%, which is good but ordinary in this market. (3) The bow-thruster and surf-tab "extras" claims were dealer puffery (one optional-and-stern-mounted, one standard equipment). **Where I agree:** GO at \$329,100 conditional on the power problem meaningfully limiting current use — the switch costs ~\$40–45K/yr in real economic terms, and that's justified by utility, not by the deal being a bargain. **Before signing:** get freight/prep included in writing, confirm the Integrated Steering Assist and trailer are line items on the build sheet, and price a Paragon (\$365–389K asks) for \$30–50K more given resale positioning.

Sources are asking-price data from search-indexed listing pages (direct fetches of some sites were blocked); sold data is thin — the \$158K 2021 sale and \$112K trade offer are the firmest anchors.
